GENERAL

VAHLE's compact conductor system type VKS10 is compact and shock hazard protected safety conductor rails. They consist of a flatformed insulated housing with integrated copper conductors. These conductors are protected according to European standard EN 60529. They comply with accident and VDE regulations in the context of electrical, mechanical and fire safety and are protected to IP 21 standards. Other cross sections than shown on page 7 are possible. If the cross-section of the N-conductor is smaller than the cross-section of the outer conductor, it must be protected against overcurrent and short-circuits in accordance with IEC60364-4-43 (HD 60364-4-43).

For the collectors the contact protection only applies if the carbons are complete in the conductor. Conductor systems located within arm's reach, and in which the collectors leave the conductor rails during operation, must be provided with protection against contact at the installation site, e. g., with the use of barriers or shutoff switches. This is only necessary for voltages above 25 Volts AC or 60 Volts DC.

The insulated housing accommodates up to 10 conductors. No special finishing work to the rail ends is necessary. The compact design allows direct mounting in runway beams and VAHLE support profiles.

The conductor rail is designed for indoor use only and for hanging and lateral arrangement in straight or curve systems.

PLEASE NOTE

When using extra-low voltages, please submit detailed information with your inquiry, especially with regard to the ambient conditions. In order to process quotations and orders, we require drawings if the conductor system includes curves or rail section isolation. Please use our questionnaire on page 26.

Electrical properties	VKS10
Max. ampacity	140 A ⁽¹⁾
Allowed voltage (UL)	690 V (600 V)
Electrical strength DIN 53481	>25 kV/mm
Special electrical strength IEC 60093	1 x 10 ¹⁴ Ohm x cm
Surface resistance IEC 60093	2.1 x 10 ¹³ Ohm
Creep resistance IEC 60112	CTI > 400
Flammability	Flame resistant, self extinguishing, UL 94 V0

Conductor material	Cross section mm ²	Impedance 50 Hz Ohm/1000 m	Resistance Ohm/1000 m	Max. continuous current A
Copper	16	1.106	1.102	63
	25	0.728	0.723	100
	30	0.602	0.595	120
	35	0.510	0.510	140 ⁽¹⁾

Chemical resistance of the isolating profile at +45 °C ambient temperature	
Benzine, petroleum, fats	resistant
Caustic soda up to 50 %	resistant
Hydrochloric acid, concent	resistant
Sulfuric acid up to 50 %	resistant
UV (Xenon test > 1500)	resistant

Water absorption	%
Max. at 20 °C	0.06

Ambient temperature range	°C
Service temperature	-30 up to +55
Max. temperature differences	50 °C (50 ≤ ΔT) ⁽²⁾
Rail length 6 m	-10 up to +40
Rail length 4 m (deep freeze storage ⁽²⁾)	-30 up to +20

(1) 80% duty cycle

(2) Cold store applications on request

(3) By parallel circuit (doubling of cross section) is the impedance and the resistance halved

GENERAL VKS10

USE FOR INDOOR APPLICATIONS

SECTIONS

The insulated housing accommodates up to max. 10 conductors and provides reliable insulation. The standard length is 6 m, shorter lengths can be supplied. The ground conductor rail is identified with continuous yellow marking. The asymmetric design eliminates the possibility of reversing the phases during installation. One fixpoint hanger is required for each conductor section.

JOINTS

The insulated housing sections are connected with joint caps. The conductors are joined with copper plug-in connectors.

FEEDS

Feed units can be supplied as end or line feeds with plastic terminal boxes or as especially flat line feeds for direct single core cable connection. Both line feed types are supplied preassembled on a 1 m conductor rail section. The end feeds are supplied loose and can only be used in conjunction with the VLS line feed.

HANGERS

All sections must be fastened at least twice and the maximum distance between suspension points must not exceed 1.2 m. The hangers are available for the following mounting options:

1. VAHLE support profile (self-locking)
2. C-rail (bolted type)
3. Plain surface (bolted type)

The conductor system can move with the sliding hangers for longitudinal expansion. At the fixpoint it is locked by an additional screw. The distance between two fixpoints is max. 6 m.

ISOLATING SECTIONS

Conductor dead sections are electrical interrupts of the conductor. Under normal operating conditions a cross over with collectors to switch the voltage off or on is only allowed with low power ratings (control current).

Conductor dead sections can be mounted at any position of the system. The plastic inserts are pushed into the copper profiles and ensure a smooth transfer of the collector brushes. The length of the isolating section has to consider the total length of the carbon brush and whether the carbon brush must or must not bridge the isolation area.

Attention: Special attention is required for double collectors or collectors switched in parallel. Use double isolating sections where necessary.

CURRENT COLLECTORS

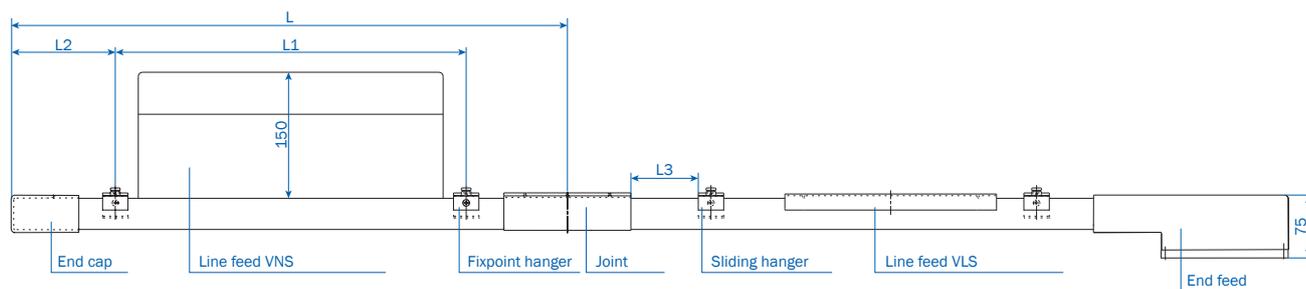

The current collectors are manufactured from impact resistant plastic and stainless steel parts. The current is transmitted by a carbon brush. According to the application, one or more current collectors are required per phase and ground conductor. The current collectors for the ground conductor can be identified by yellow color-coding and are equipped with different fixings to make them not-interchangeable with the phase current collectors. Springs in the current collectors ensure even pressure of the carbon brush against the conductor, thus maintaining reliable contact. The current collectors must be mounted on base plates or rectangular brackets. The length of the current collector cable should not exceed 3 m, if the connected overload protection is not according to the load of this connecting cable. See as well DIN VDE 0100, part 430 and DIN EN 60204-32. (Note: The above mentioned often occurs in systems with more collectors per system.)

The connection cables provided are adequately sized for the specified nominal currents. Reduction factors in accordance with DIN VDE 0298-4 are to be taken into account for various layout methods.

LAYOUT PLAN

We create a custom layout plan for each delivery.

SYSTEM DIAGRAM

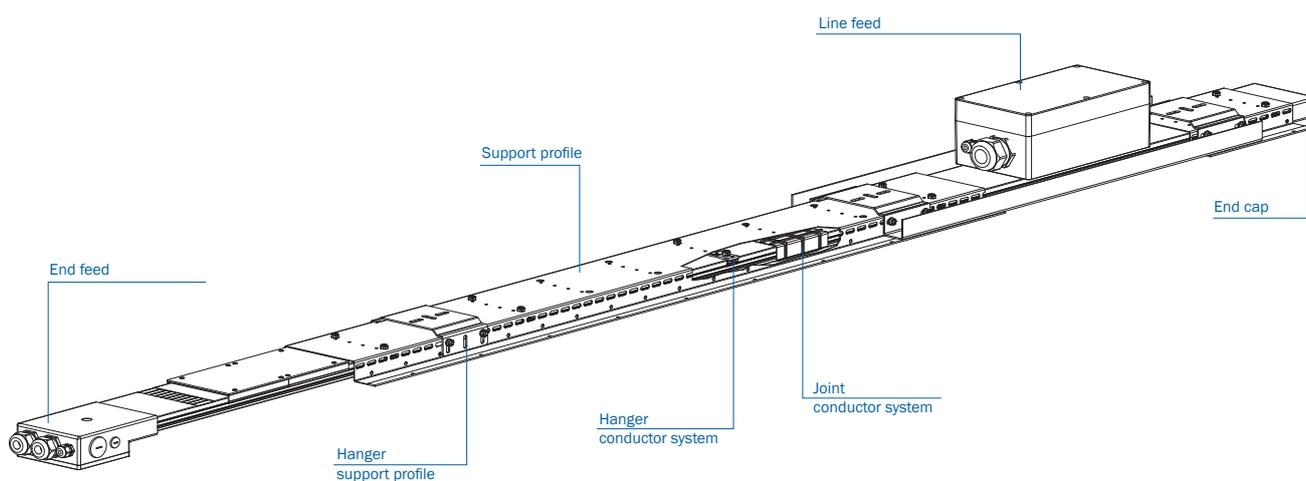

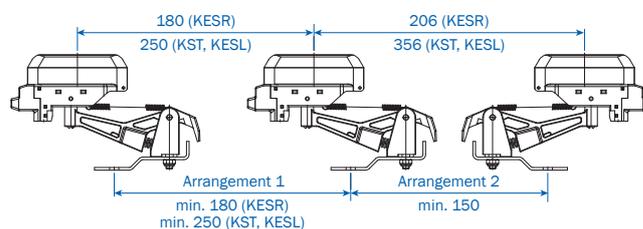

- L = Length of conductor section (standard length: 1 m – 6 m, respectively short length)
- L1 = Support distance for straight runs: max. 1.2 m, in curves 0.6 m
- L2 = Overhang (max. 350 mm)
- L3 = Distance to be allowed for conductor system expansion (min. 50 mm)

MAX. HANGER DISTANCE

Conductor system VKS10	
In straight runs	1.2 m
In curves	0.6 m
Horizontal	0.6 m

Support profile VTP10	
On rack uprights	4.5 m
On support posts	4.0 m
Horizontal arrangement	3.0 m
Attached to the wall	3.0 m

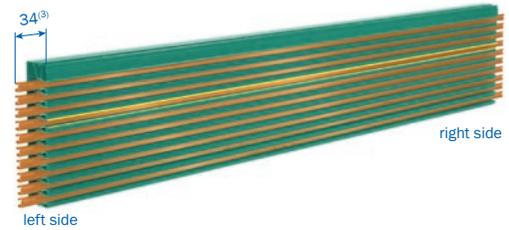

SECTIONS

Standard lengths: 6 m

Cold stores: 4 m

HS = with ground

Attention: Joints to be ordered separately (see page 8)

(1) At 80 % duty cycle

(2) 2 conductors per phase

(3) Powerail projecting length 34 mm at 20 °C ambient

(4) Consult factory in case of circuits incl. N conductors

(5) Not with UL-approval: $U_{UL} = 600 V$

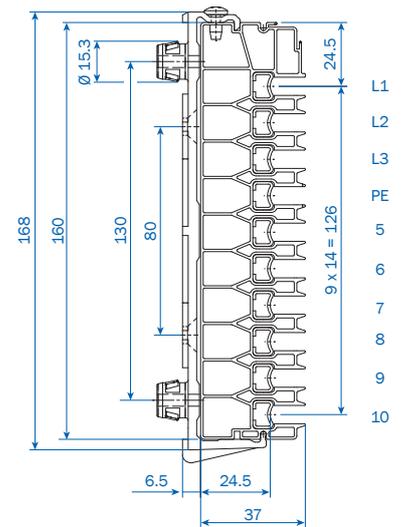

Complete types e.g. VKS10-6/60-2000HSA for 2 m. Order No. 780042

The 4-digit number (in bold) in the type indicates the length of the section in mm.

• The last number of the order specifies the section length.

Please suffix the order number with 1, 2, 3, 4.

US-VU10-10R	conductor 1 – 10	780270

(1) Length of the conductor dead section (longer dead sections on request)

COMPACT CURRENT COLLECTORS

COMPACT CURRENT COLLECTOR KESR 63S

for reverse run with adapter plate and clamping block

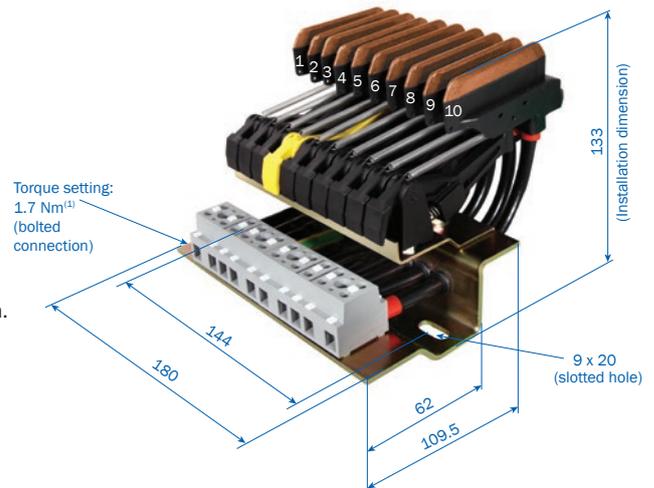

Distance between conductors: 14 mm

Lift and swivel: ± 15 mm

Contact pressure: approx. 7 N per carbon brush

PE (ground) on No. 4, (other combinations possible)

The ground collector always moves first when entering the conductor system.

VTPB360-140-155	3.164	140 - 155	2	780161
VTPB360-150-165	3.712	150 - 165	2	780162
VTPB130-S1/2	0.944	max. 8	5	780163
VTPB130-HST	0.922	max. 8	6	781678

(1) Bigger clamping range on request

(2) Locking torque of the round-head screw M10, MA = 18 Nm

POSITIONING SYSTEMS

Cost-efficient installation of different positioning systems

EARTHING OF THE CODE RAIL

Connect the WCS code rail at least every 30 m to the potential of the system of low resistance.

Type	Weight kg	Order No.
PS-WCS3-EVTP10	0.026	302160

FIXING CLIP

for laminate band

Fixing distance 0.2 m

Type	Weight kg	Order No.
PS-WCS3-BKK	0.002	780193

POSITION ENCODING BAND

Fixing distance 0.2 m

WCS⁽¹⁾

1x per conductor section

BCB⁽²⁾

Type	Weight kg	Description	Order No.
PS-WCS3-CS70-L2	0.040	Plastic laminate band with special perforation (WCS 3)	302106
PS-WCS3-FPK	0.001	Screws for fixation	780140
PS-BCB-50	0.015	Barcode band (BCB)	302107

(1) Max. travel length 327 m

(2) Max. travel length 10.000 m

INSTALLATION TOOLS

JOINT CAP ASSEMBLY TOOL

for use with support profile

Type	Weight kg	Order No.
MZ-MGVK	0.350	780070

COPPER CONNECTOR MOUNTING LEVER

for use with support profile

Type	Weight kg	Order No.
MZ-MGVS	1.50	780090

INSTALLATION COMB

Set for VKS10

To adjust the air gap at the joint

Type	Weight kg	Order No.
MZ-MK	0.230	781112

QUESTIONNAIRE

Company: _____ Date: _____

Phone: _____ Fax: _____

Email: _____ Website: _____

1. Number of conductor system installations: _____
2. Type of equipment to be powered: _____
3. Operating voltage: _____ Volt Frequency: _____ Hz
 Three-phase voltage AC voltage DC voltage
4. Track length: _____
5. Number of conductors: _____ neutral: _____ control: _____ ground: _____
6. Mounted position of conductor system:
 Conductor system pendant, collector cable facing to the bottom Conductor system pendant, lateral payout of conductor cable⁽¹⁾
 Support distance _____ m (max. 2 m) Other: _____
7. Number of consumers per system: _____
8. Indoor system Outdoor system
9. Other operating conditions (humidity, dust, chemical influence, etc.) _____
10. Ambient temperature: _____ °C min. _____ °C max.
11. Hall expansion joints _____ pieces _____ expansion max.
12. Position and number of feeding points⁽¹⁾: _____
13. Position and number of isolating sections (e. g. for maintenance)⁽¹⁾: _____
14. How will the conductor be arranged?⁽¹⁾: _____
15. Brackets required: Yes No c/c distance beam/conductor system: _____
16. Travel speed: _____ m/min. in curves: _____ m/min. at transfers: _____ m/min.
17. Max. voltage drop from the conductor system feed point to the consumer considering starting current. _____
18. Power consumption of the individual consumer loads: _____

Motor data	Crane 1						Crane 2							
	Power kW	Nominal current			Starting current		Type of motors ⁽²⁾	Power kW	Nominal current			Starting current		Type of motors ⁽²⁾
		A	cos φ _N	% duty	A	cos φ _A			A	cos φ _N	% duty	A	cos φ _A	
Hoist motors														
Auxiliary hoist														
Long travel														
Cross travel														

Mark with * those motors which can run simultaneously.

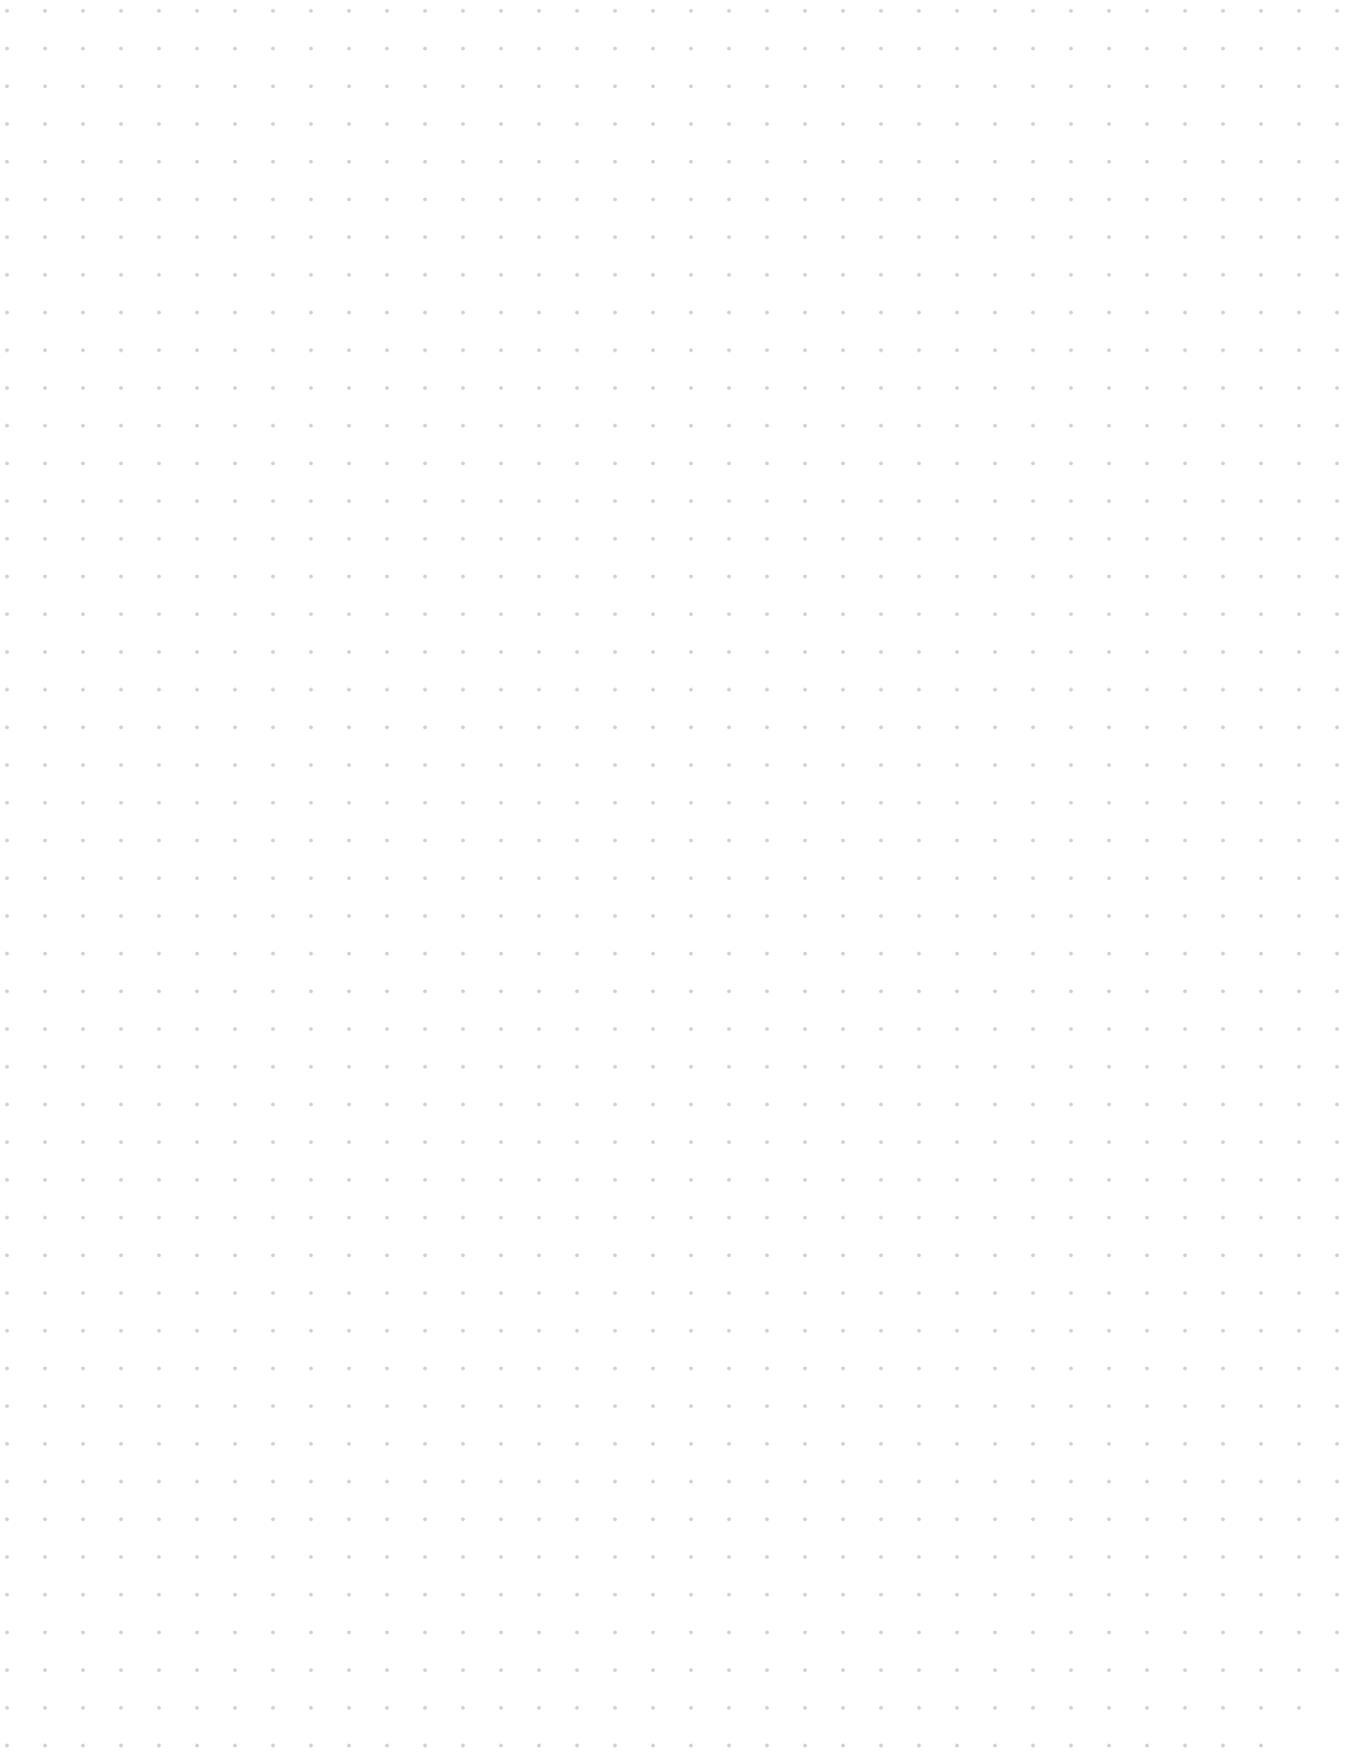

Mark with Δ those motors which can start up simultaneously.

Further remarks: _____

Signature: _____

(1) For curved tracks, conductor system with isolating sections etc., we require sketches to enable us to prepare a quotation
 (2) Use: K for squirrel cage motor, S for slipring motor, F for frequency controlled motor
 We reserve all rights to make alterations in the interests of further development
 Please copy and fill in the questionnaire.

NOTES

A large grid of small dots for taking notes, covering most of the page. The dots are arranged in a regular pattern, forming a grid that is approximately 30 columns wide and 40 rows high. The grid is intended for writing notes.
